

Until definitive testing and evaluation occurs, I must register opposition to BPL. In three states I have lived in, power lines have had excessive (often illegally so) emissions that have impacted the reception of AM broadcast stations and shortwave reception in all modes. The reception of longwave navigation beacons has been especially vulnerable. As "noisy" lines appear to be the rule rather than the exception, the insertion of broadband data will only make a barely tolerable situation worse. Please, let "running" technology exist rather than jeopardize vital communication and entertainment wireless communications with the current "crawling" technology.

Thank you.
